Professional Summary

Analytical Computer Science undergraduate with a deep understanding of algorithms, data structures, and database management. Experienced in full-stack development with a focus on server-side architecture and modern web technologies. A proactive problem-solver with a strong theoretical foundation, seeking an internship to apply computational principles to complex, real-world software challenges.

Technical Skills

Programming Languages: Java, Python, JavaScript

Web Technologies: HTML, CSS, React.js, Node.js

Databases: MySQL, PostgreSQL, MongoDB

CS Core & Concepts: Data Structures & Algorithms, Object-Oriented Programming, Software Architecture

Tools & Platforms: Git, GitHub, VS Code, Vercel

Projects

ADORIX – Enterprise Resource & Management System | 2025

LINK <https://www.adorixit.com/>

Technologies: React.js, Node.js, MySQL, JWT Authentication

- Building a comprehensive web solution designed to streamline through a modern, responsive interface.
- Implementing a secure Server-side architecture using Node.js and Express, incorporating JWT for robust user authentication and session management.

Personal Finance Tracker | 2025

LINK <https://finance-tracker-two-neon.vercel.app/>

Technologies: Node.js, Express.js, MongoDB, REST APIs

- Designed a full-stack application for managing personal income and expenses with automated balance calculations.
- Built a robust Server-side architecture using Node.js to handle secure data requests and user input validation.

Electricity Analyst | 2026

LINK <https://electricity-analysis-2zyk.vercel.app/>

Technologies: Next.js, Tailwind CSS, Supabase, Clerk Auth, Google Gemini AI, Resend

- Designed a premium energy intelligence platform featuring an interactive dashboard to monitor real-time consumption metrics and cost trends.
- Integrated sustainability tracking to calculate user carbon footprints and visualize environmental impact with tree-offset metrics.

- Developed a global workspace for students to form teams, explore projects and build applications.
- Integrated Clerk Auth for secure user onboarding and supabase alongside Nodemailer to seamlessly manage project requests and student communications.

TECHNICAL MINI-PROJECTS

Algorithmic-Enhanced Snake RL

LINK <https://github.com/SahanAdithya/snake-rl-algorithms>

A Deep Q-Network (DQN) built with PyTorch that learns to navigate the Snake game.

smart-campus-api

LINK <https://github.com/SahanAdithya/smart-campus-api>

A JAX-RS based RESTful API for managing smart campus rooms, sensors, and sensor readings using in-memory data structures

Education

University of Westminster (Informatics Institute of Technology)

Sep 2024 – Present

BEng (Hons) Computer Science

Relevant Coursework: Object-Oriented Programming, Database Systems, Client-Server Architectures, Machine Learning and Data Mining, Algorithms: Theory, Design and Implementation, Web Design and Development, Software Development, Software Development Group Project

Maris Stella College

2022 – Completed

G.C.E. Advanced Level - Physical Science

Subjects: Physics, Combined Mathematics, Chemistry

Leadership & Activities

Project Team Lead – University Assignments

- Coordinated team workflows and delegated tasks for collaborative software projects, ensuring all milestones were met on schedule.

Student Peer Mentor

- Assisted junior students in understanding core computational concepts, including Data Structures and Algorithms through guidance sessions.

School Prefect

- Demonstrated strong leadership, strategic planning and motivational skills while leading a team.
