Professional Summary

Analytical Computer Science undergraduate with a deep understanding of algorithms, data structures, and database management. Experienced in full-stack development with a focus on server-side architecture and modern web technologies. Currently specializing in Machine Learning to build data-driven applications. A proactive problem-solver with a strong theoretical foundation, seeking an internship to apply computational principles to complex, real-world software challenges.

Technical Skills

Programming Languages: Java, Python, JavaScript

Machine Learning: Model Evaluation, Data Pre-processing

Web Technologies: HTML, CSS, React.js, Node.js

Databases: MySQL, PostgreSQL, MongoDB

CS Core & Concepts: Data Structures & Algorithms, Object-Oriented Programming, Software Architecture

Tools & Platforms: Git, GitHub, VS Code

Projects

ADORIX – Enterprise Resource & Management System

Technologies: React.js, Node.js, MySQL, JWT Authentication

- Building a comprehensive web solution designed to streamline through a modern, responsive interface.
- Implementing a secure Server-side architecture using Node.js and Express, incorporating JWT for robust user authentication and session management.
- Designing and normalizing relational database structures to ensure data integrity and efficient retrieval for complex, multi-user environments.

Personal Finance Tracker

Technologies: Node.js, Express.js, MongoDB, REST APIs

- Designed a full-stack application for managing personal income and expenses with automated balance calculations.
- Built a robust Server-side architecture using Node.js to handle secure data requests and user input validation.
- Integrated a NoSQL database for flexible data storage and implemented filtering logic to categorize transactions by date and type.

Traffic Vehicle Data Management System

Technologies: Python, Tkinter, SQL, Object-Oriented Programming

- Engineered a robust desktop-based management system using Python and Tkinter, focusing on an intuitive UI/UX for managing high volumes of vehicle information.

- Implemented a relational database schema using SQL to ensure data integrity, utilizing Object-Oriented Programming principles to create modular and reusable code.
- Developed automated reporting and data visualization modules to transform raw traffic data into actionable insights and trend analysis.

Real-time Weather Dashboard

Technologies: HTML, CSS, JavaScript

- Developed a responsive web application that fetches and displays real-time weather data for any global city using a third-party API.
- Designed a clean, mobile-first user interface using CSS to visualize environmental data such as temperature, humidity and wind speed.

Education

University of Westminster (Informatics Institute of Technology)

Sep 2024 – Present

BEng (Hons) Computer Science

Relevant Coursework: Object-Oriented Programming, Database Systems, Client-Server Architectures, Machine Learning and Data Mining, Algorithms: Theory, Design and Implementation, Web Design and Development, Software Development, Software Development Group Project

Leadership & Activities

Project Team Lead – University Assignments

- Coordinated team workflows and delegated tasks for collaborative software projects, ensuring all milestones were met on schedule.

Student Peer Mentor

- Assisted junior students in understanding core computational concepts, including Data Structures and Algorithms through guidance sessions.

School Prefect

- Demonstrated strong leadership, strategic planning and motivational skills while leading a team.
